基礎数学 I

 $\boxed{1}$ 実数列 $\{a_n\}$ を

$$a_1 = \sqrt{6}, \qquad a_{n+1} = \sqrt{6 + a_n} \qquad (n = 1, 2, \dots)$$

によって定める. 以下の問いに答えよ.

- (i) 数列 $\{a_n\}$ は上に有界であることを示せ.
- (ii) n が増加するとき数列 $\{a_n\}$ は単調に増加することを示せ.

Basic Mathematics I

1

Let $\{a_n\}$ be a sequence of real numbers defined by

$$a_1 = \sqrt{6}, \qquad a_{n+1} = \sqrt{6 + a_n} \qquad (n = 1, 2, \dots).$$

Answer the following questions.

- (i) Show that the sequence $\{a_n\}$ is bounded from above.
- (ii) Show that the sequence $\{a_n\}$ is monotonically increasing as n increases.
